

# Primary Care Networks Overview Pack

### **WELWYN GARDEN CITY A PCN**

Pack produced - January 2023 - NHS Hertfordshire & West Essex ICB

Produced by Hertfordshire & West Essex ICB's - Population Health Management & Public Health Teams

Working together for a healthier future

### **Population Health Management**

Population Health Management (PHM) is a partnership approach across the NHS and other public services including councils, the public, schools, fire service, voluntary sector, housing associations, social services and police. All have a role to play in addressing the interdependent issues that affect people's health and wellbeing.

The coronavirus (COVID-19) pandemic has further highlighted the known link between poorer health outcomes, ethnicity and deprivation. Integrated care systems, working with the local authority and the voluntary sector, have used PHM to identify people who need more support and those with the most complex needs within their localities, so that efforts can be targeted to protect certain populations through personalised care models, public health advice, testing and vaccination programmes.

For the public, it should mean that health and care services are more proactive in helping people to manage their health and wellbeing, provide more personalised care when it's needed and that local services are working together to offer a wider range of support closer to people's homes.

For doctors, nurses, social care, therapists and other frontline staff, this should mean greater support and insight from integrated care systems to enable care and support to be designed and proactively delivered to meet individual needs – it should mean less duplication and a reduction in workload pressures as it ensures the right care is given at the right time by the right person.

For local councils, health care managers and clinicians who commission services – greater understanding of the local population will ensure they can better predict what residents need. PCNs are key to this, as health and care providers work together and take collective responsibility for the care and support offered to improve outcomes, they can use their resources to keep people healthier.

### **Key Messages**

Welwyn Garden City A PCN has a similar population profile compared to England except in the age categories 4-14 and 35-54 which is higher and lower in the age categories 20-29. The majority of people live within the 5 least deprived deciles (6-10).

27.2% population have at least 1 Long Term Condition. 4.7% have more than 5 LTCs compared to 5.6% for the ICB. The population pyramid shows a similar profile to England for those living with LTCs, except the age categories 20-54 which is higher and lower in age categories 60-79.

Wider determinants analysis from Public Health Evidence and Intelligence shows Welwyn Garden City A as a mid-ranged PCN set within the ICB across except for Income and Employment where it is one of the most deprived.

The spread of patients for Welwyn Garden City A PCN indicates 6.96% of the population are not located within the Hertfordshire & West Essex boundaries; this means that this population may be accessing services outside of the ICB and the impact of coterminous alignment with neighbouring ICBs must be taken into account for this population by the PCN.

Expected population growth for Welwyn Hatfield district by the Local Authority, forecasts continued increase between 2023 through to 2034 which will bring additional demands for healthcare. Projections show an expected increase in the number of people over 65 from ~20k to ~23k.

When analysing the underlying Segmentation Model data the conditions with highest per 1,000 registered prevalence that are highlighted for Welwyn Garden City A PCN, it is to be noted that there are no significant areas of concern but some that need to be monitored going forward, such as COPD, Obesity, Cancer, Learning Disabilities, Hypertension, Chronic Kidney Disease, Atrial Fib, Anxiety and MH.

Urgent & Emergency Care in 2022/23 for Welwyn Garden City A PCN A&E Attendance rates per 1,000 population, is the highest of all PCNs for East & North place.

When comparing the Ambulatory Care Sensitive rates per 1,000 population between places, the East & North place has the lowest rate in the ICB. Within East & North place, Welwyn Garden City A has a higher rate per 1,000 population, than the average.

When looking at the ACS conditions for Welwyn Garden City A the highest volume and cost is within the End of Life, Frailty and Dementia segment in the over 65 age group and the next highest volume and cost is for the over 65 age group in the Advanced Disease and Complexity segment as well. It is to be noted that under End of Life, Frailty and Dementia and Advanced Disease and Complexity segments, there is a notable use by the 41-64 age group for volume and cost.

Ambulatory Care Sensitive conditions of note for people aged over 65 within the Advanced Disease and Complexity, is highlighted as Heart Failure with the highest volume and cost, followed by COPD and AF and Flutter. Ambulatory Care Sensitive conditions of note for people aged over 65 within the End of Life, Frailty & Dementia is highlighted as Heart Failure and COPD with the highest volume and cost, followed by AF and Flutter.

14.8% of the general population in HWE ICB live within the 4 most deprived deciles, whilst 16.1% of the population in the EoL, severe frailty and severe dementia segment live within the 4 most deprived deciles. In Welwyn Garden City A 21.61% of the population in the EoL, severe frailty and severe dementia segment live within the 4 most deprived deciles.

As we would expect the average number of acute and chronic conditions is significantly higher within this segment that the general population as are all activity measures. The average number of Chronic Conditions for people within Welwyn Garden City A PCN is below the ICB, and the data shows higher usage of GP services.

Within this segment we can see the presence of Chronic Cardiac Disease, Chronic Respiratory Disease and Heart Disease being highlighted which chimes with the reason for admission within previous analysis for ACS conditions. It is to be noted that Hypertension is high across all deciles and higher than the ICB.

For Welwyn Garden City A the data shows higher Asthma, COPD and Heart Failure rates which was identified as a theme within the ACS analysis.

### Demographics, Conditions & Segment Overview

#### **National Tool View and Population Demographics and Projections**

The following slides represent screen shots from the Nationally Available Tools provided via NHSE.

The information within these tools are used by NHSE to measure and monitor progress. There is some valuable information available within these tools, however the value of these tools is realised when the information within them is triangulated with local data and intelligence.

#### **Public Health Wider Determinants**

These provide context for understanding the wider population need, so as Integrated Neighbourhood Teams develop you have a shared understanding of the health and care needs of your population to inform the development of interventions for different patient groups.

When compared with the overall PCN demographics on the previous page, those in the PCN whom have an LTC as defined by NHS England, are benchmarked against the English averages, the view for the PCN shows us that 27.2% population have at least 1 Long Term Condition. 4.7% have more than 5 LTCs compared to 5.6% for the ICB.

The population pyramid shows a similar profile to England for those living with LTCs, except the age categories 20-54 which is higher and lower in age categories 60-79.

Primary Care clinical domain indicators as provided by NHS England as highlighted here with Trigger Levels against each, and represents a consolidation of data sets, designed to reduce the burden on GPs following these outlier identification. This indicator set is to support quality assurance and improvement of GP services; here, the higher the Level indicated, the more indicative of risk that has been found for that indicator.

The Practices have opportunities for every Level 1 indicated metric; however, any Level 2 indicator must be reviewed; guidance on this data set can be found in the below link, and for more up-to-date data, please log into your Ardens Manager (https://app.ardensmanager.com/).

### **Public Health - PCN Wider Determinants**

### Wider Determinants

In Welwyn Garden City A PCN an estimated:

- 13.6% of children live in poverty.
- 12.5% of older people live in poverty.
- 12.1% of households live in fuel poverty.
- 7.9% of households are overcrowded.
- 35.4% of people aged 65 and over live alone.
- 0.6% of people cannot speak English well.
- 4% of working age people are claiming out of work benefits.
- 22.3% of children aged 4-5 and 29.1% of children aged 10-11 are overweight.

Where 1 is the most deprived in HWE ICB and 35 the least

PH.Intelligence@hertfordshire.gov.uk

The above provides a summary of the wider determinants of health for Welwyn Garden City A.

Wider determinants analysis from Public Health Evidence and Intelligence shows Welwyn Garden City A as a mid-ranged PCN set within the ICB across except for Income and Employment where it is one of the most deprived.

### **Spread of Patients**

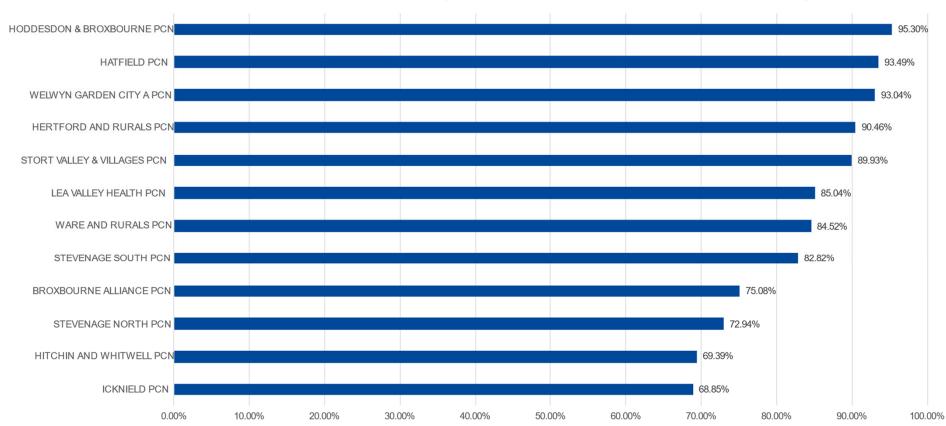

Correct as of July 2022

Source: NHS Digital (2022)

### SPREAD OF PATIENTS ACROSS ENGLAND CONT.

Percent of East and North Hertfordshire patients within Hertfordshire and West Essex boundary

This chart shows the proportion of the registered population living within the ICB geographical boundary.

The spread of patients for Welwyn Garden City A PCN indicates 6.96% of the population are not located within the Hertfordshire & West Essex boundaries; this means that this population may be accessing services outside of the ICB and the impact of coterminous alignment with neighbouring ICBs must be taken into account for this population by the PCN.

### **Public Health - Population Projections**

# **Projection Pyramids**

Black line indicates HWE ICS values.

Population pyramids and table shown for Welwyn Hatfield district.

District shown is based on the largest majority of the PCN's registered population.

Age Band	2022 Projection	2032 Projection	2042 Projection
Under 5	6,916	6,767	7,208
Under 24	43,311	45,626	43,848
24-64	62,924	62,453	64,211
65+	19,648	23,456	26,229
85+	3,339	3,917	4,775

PH.Intelligence@hertfordshire.gov.uk

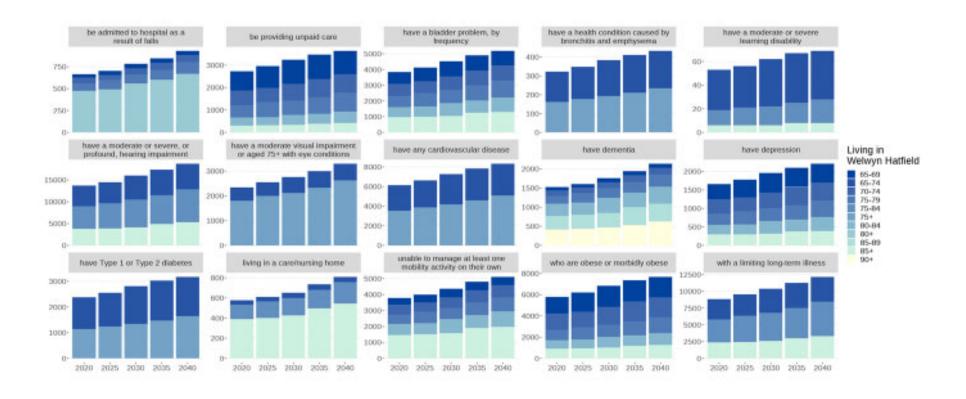

Expected population growth for Welwyn Hatfield district by the Local Authority, forecasts continued increase between 2023 through to 2034 which will bring additional demands for healthcare. Projections show an expected increase in the number of people over 65 from ~20k to ~23k.

### **Public Health - Projections on Conditions**

## People aged 65+ projected to...

PH.Intelligence@hertfordshire.gov.uk

The above shows the impact on health due to the expected increase in the number of people over 65.

### **PHM Segment Model - Overview**

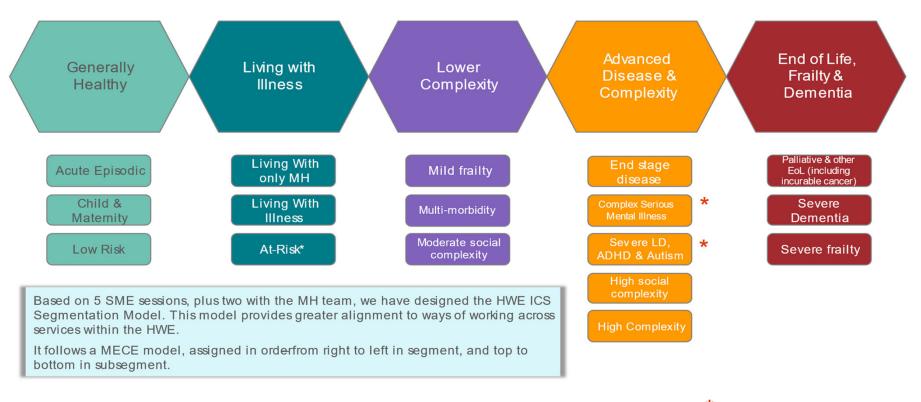

The ICB has worked in partnership with Optum to develop a Health Segmentation model using linked data covering 1.2m of our ICS population. As part of the process representation from different care settings and internal ICB teams were engaged.

Our core PHM and Population Segmentation model combines primary and acute care data with wider determinants and community, mental health and social care data where available. The model has been built with a view to include additional data sets as they become available. The segmentation model provides the foundations for advanced population health management analytics that goes beyond patient level risk stratification.

The below demonstrates the 5 high level segments and the sub segments beneath within the model.

#### Segmentation model – third iteration

awaiting finalisation of methodology

2

### **PHM Segment Model - Overview**

The logic behind the ICB Health Segmentation model has been developed to allow the ICB to consider its whole population and the different interventions required to improve the outcomes of different groups of people with similar characteristics.

Alongside the segmentation logic an outcomes framework was developed.

#### Whole Population Outcomes

- INCREASE life expectancy / INCREASE average age at death in adults.
- REDUCE gap in age at death between most and least deprived deciles.
- INCREASE disease-free life expectancy
- · REDUCE rates of suicide
- REDUCE proportion of population who are digitally excluded either by lack of equipment, connectivity, skills, cost, or coeffide to be able to access clinical services.

#### "Generally healthy"

#### Who is in this group?

- Children and adults in the general population who are not otherwise captured in other segments.
- Most likely receive episodic care due to accidents and injuries or linked to maternity and CYP routine services.
- No diagnosed conditions.

#### Social & Clinical Outcomes

- INCREASE screening
- IMPROVE experience of Maternity services.
- REDUCE rates of childhood obesity in reception and year 6.
- REDUCE rate of infant mortality
- REDUCTION in proportion of people diagnosed with low mood and/or depression.

#### Living with Illness

#### Who is in this group?

- Includes people with single illnesses (including MH), that are currently controlled or able to self-manage and will receive most of their care in a planned way through primary care.
- Includes people with social or behavioural risk factors for more advanced disease.

#### Social & Clinical Outcomes

- INCREASE proportion of patients who feel able to self-manage their condition.
- REDUCE prevalence of behavioural risk factors for more advanced diseases, including: obesity, smoking status and drug abuse.
- REDUCE episodes of ill -health requiring emergency admissions for long term condition.
- INCREASE percentage of people with mental health problems in employment.
- INCREASE proportion of people who are able to maintain life routines considered important to the individual, e.g work, ..
   REDUCE emergency attendances due to alcohol -related harm.

#### **Lower Complexity**

#### Who is in this group?

 Includes people with moderate levels of morbidity and complexity. This is either as a result of: Multi-morbidity (24 long term conditions), Mild frailty and/or Social complexity.

#### Social & Clinical Outcomes

- INCREASE proportion of patients who feel able to self-manage their condition.
- REDUCE rate of emergency admissions for people with lower complexity.
- INCREASE proportion of patients offered personalised care and support planning.
- REDUCE prevalence of behavioural risk factors for more advanced diseases, including: obesity, smoking status and drug abuse.

### Advanced Disease & Complexity

#### Who is in this group?

 Advanced disease and complexity represents a cohort of people with one or more significant illnesses that impact on their day to do functioning as well as people with significant risk from social complexity

#### Social & Clinical Outcomes

- INCREASE five year survival from cancer.
- REDUCE rate of emergency admissions in people with advanced disease or complexity.
- REDUCE the difference in average age of death between people with learning disability/SMI compared t general population.
- REDUCE proportion of whole population who are living with advanced disease and/or complexity.

### End of Life, Frailty & Dementia

#### Who is in this group?

 End of Life, frailty and dementia is the first segment in the logic and is the first set of criteria on which people are assessed. The segment includes: people who are identified as being in their last year of life, or on the palliative disease register as well as people with incurable cancer. This segment also includes those with severe frailty and/or severe dementia.

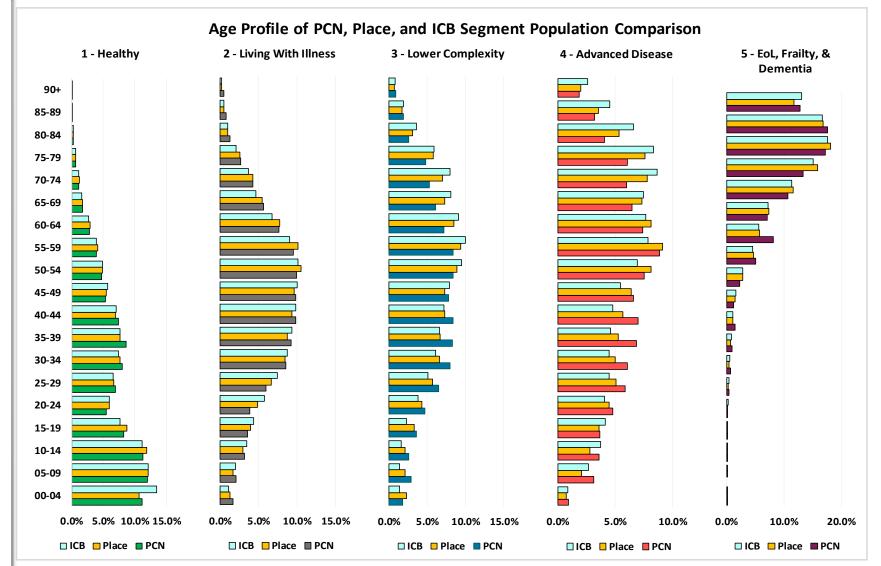

#### Social & Clinical Outcomes

- REDUCE dependency for emergency care services e.g A&E attendances and emergency admissions.
- INCREASE proportion of people who die in their preferred place of death.
- INCREASE identification of frail and complex patients, including those with dementia or at end of life.
- REDUCE proportion of days disrupted by emergency care in last year of life.
- INCREASE number of days spent at home in last year of life.
- INCREASE proportion of people supported at home instead of in residential care.

Source: Optum & HWE PHM Team - 14th Oct 2022

### **Age Profile and Health Segment**

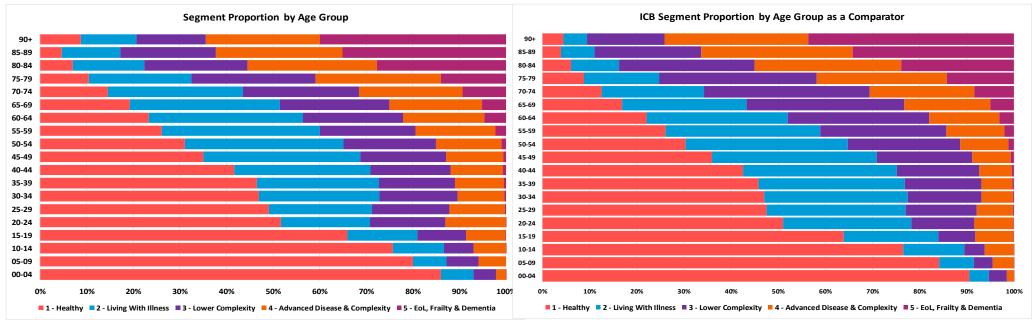

Each registered person is assigned to a segment and this can be cut by age group and also geographically by Place or PCN.

The above looks at the breakdown by age of people within each segment. It provides the PCN value against the Place and ICB value.

Source: HWE PHM Team, Combined population data re-extract via Optum

### **Demographic Breakdowns** - Segment & Deprivation Quintiles

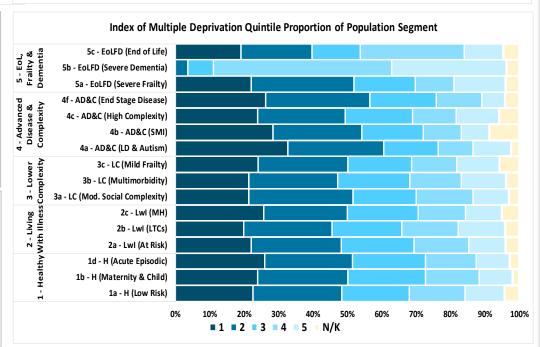

The ICB Health Segments here are broken down by total population and 5 year age groups; as expected with age the proportion of people within the healthy segment decreases.

The illustration on the left represents the PCN breakdown whilst the one on the rights shows the ICB breakdown.

Overall Welwyn Garden City A has a higher profile for most age categories for segments 2 to 5, compared to the ICB population.

The illustration bottom right shows the Sub-Segments by Deprivation Quintile, here we can see the levels of deprivation illustrated within the earlier wider determinants slide demonstrated within this breakdown.

The data from the ICB model has been collated and the above provides a rate per 1,000 population with a recording of each condition. The darker the blue the higher the presence of the condition within the PCN's population.

Further information and tools that monitor identification and management of people with conditions are available in Ardens Manager rolled out to support the ICB's ECF. Searches available via Ardens can support with case finding and identifying people with management indicators that are due.

When analysing the underlying Segmentation Model data the conditions with highest per 1,000 registered prevalence that are highlighted for Welwyn Garden City A PCN, it is to be noted that there are no significant areas of concern but some that need to be monitored going forward, such as COPD, Obesity, Cancer, Learning Disabilities, Hypertension, Chronic Kidney Disease, Atrial Fib, Anxiety and MH.

On this page of conditions, we can see that the PCN has higher prevalence of Inflammatory Bowel Disease, Kidney Transplant, Muscular Dystrophy and High BP.

### **PCN Benchmarking - A&E Activity**

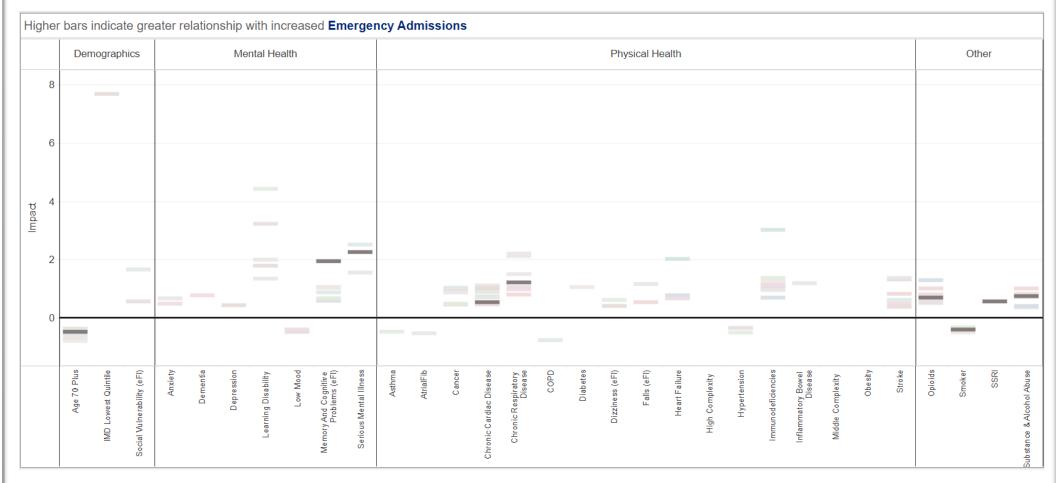

The charts in the next two pages show activity for the PCN compared against all other PCNs at the Place level.

The Model - A statistical regression model is used to decide which Risk Factors correlate with a significant impact on the selected targets as presented in these charts, the height of the bar for each PCN relates to the correlation of a Risk Factor and an increase in impact on the selected target condition.

The impact for the PCN is given and will vary for each characteristic; a wide variance may indicate differences in care or good practice which could be shared; some impacts are positive. Higher bars indicate a greater relationship with increased A&E attendances

### **PCN** Benchmarking - Emergency Admissions

This uses the same principles as the previous slide but looks at Emergency Admission.

Learning Disability admissions shows the most variance across all PCNs, meaning that characteristic has a high impact on emergency admissions.

### **Urgent and Emergency Care**

As part of the ICB Urgent and Emergency Care Programme a needs analysis was undertaken.

#### Overall aim

\* To understand what and where the need is for access to urgent and emergency care in Hertfordshire and West Essex

#### **Objectives**

- \* To build a comprehensive picture of who needs to access UEC in HWE and who could be better cared for in alternative settings.
- \* To understand the root causes of why people are accessing UEC when there could have been more appropriate alternative pathways
- \* To build consensus among stakeholders around what the key issues in UEC are
- \* To draw conclusions based on public health intelligence and triangulation of data to inform a successful and achievable UEC strategy

Some of the initial outputs from this work have been included within the next few pages, providing the PCN benchmarking.

### **UEC Overview**

Hertfordshire & West Essex ICB – East & North A&E Summary – Who are attending and why?

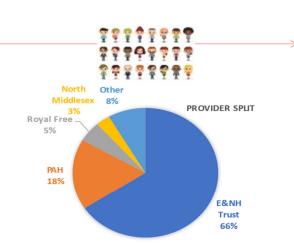

Children 0 -18 Adults 19 -64 Older People 65+

218,296 A&E Attendances in 2021/22

Children = 56,287 (25.8%) Adults = 111,219 (50.9%) Older People = 50,790 (23.3%)

57,811 26.5% of attendances resulted in no investigation and no treatment (includes Uncoded Activity)

> Children = 19,082 (34%) Adults = 30,658 (27.6%) Older People = 6,944 (15.9%)

128,296 people attended A&E in 2021/22

Children = 34,197 (26.5%) Adults = 68,101 (52.8%) Older People = 26,873 (20.8%)

This translates to 1 in 5 people registered with East & North attending A&E

Children = 1 in 4 children Adults = 1 in 5 adults Older People = 1 in 4 older people

,

### **UEC**

Rates of A&E attendances across the ICB have returned to pre covid levels and above.

The impact of covid can clearly be seen in the top left chart.

Urgent & Emergency Care in 2022/23 for Welwyn Garden City A PCN A&E Attendance rates per 1,000 population, is the highest of all PCNs for East & North place.

# **Unplanned Hospitalisation for Chronic Ambulatory Care Sensitive Conditions**

This analysis looks at Unplanned hospitalisation for chronic ambulatory care sensitive conditions
NHS Outcomes Framework Methodology.

Between April 2021 and September 2022 there have been 11,953 people admitted 15,563 times for chronic ambulatory care sensitive conditions across the ICB.

Costed at tariff the value was approximately £42 million.

The table here shows the breakdown for Welwyn Garden City A PCN.

Chronic ACS admissions April 2021 - September 2022 Herts & West Essex ICB

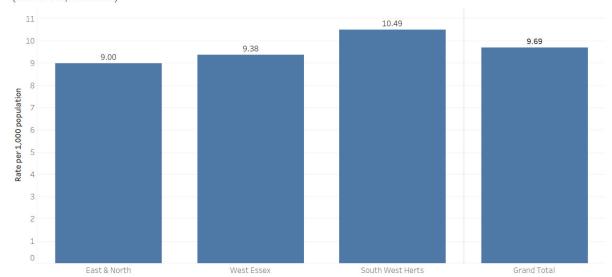

Chronic ACS	Admissions	People	Average cost of admission	Tariff Total Payment National
CVD: AF and Flutter	62	55	£2,422	£150,186
CVD: Angina	18	16	£1,383	£24,892
CVD: Congestive Heart Failure	125	103	£4,585	£573,086
CVD: Hypertension	11	11	£756	£8,311
Diseases of the blood	15	15	£2,500	£37,493
Mental and Behavioural Disorders	9	5		
Neurological Disorders	53	33	£1,714	£90,839
Nutritional, endocrine and metabolic	64	44	£2,537	£162,385
Respiratory: Asthma	35	31	£1,608	£56,278
Respiratory: COPD	160	113	£2,723	£435,659
Grand Total	552	400	£2,788	£1,539,129

<sup>\*</sup> Average cost for Mental and Behavioural is not representative as non-PbR

### ACS Admission Rates per 1,000 Population by Place

Chronic Ambulatory Care Sensitive Conditions by Place Rate per 1,000 Population (Total Population)

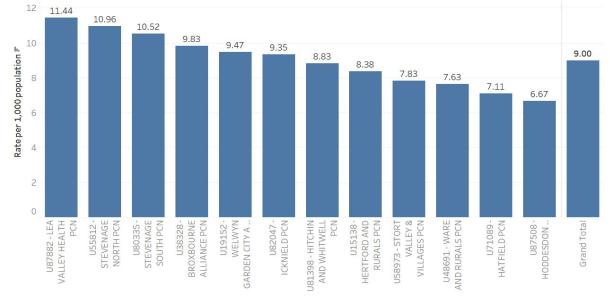

When comparing the Ambulatory Care Sensitive rates per 1,000 population between places, the East & North place has the lowest rate in the ICB.

Within East & North place, Welwyn Garden City A has a slightly higher rate per 1,000 population, than the average.

The following slides look at how this is broken down by the different ACSs and how the patients fall within the different segments.

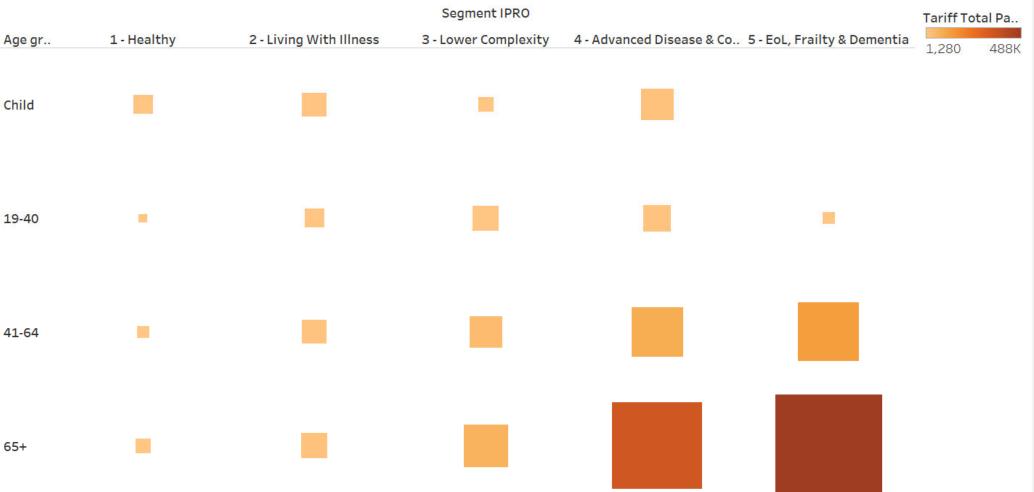

Chronic Ambulatory Care Sensitive Conditions by Place Rate per 1,000 Population (Total Population)

### **Chronic ACS by Segment**

The above chart looks at the ACS admissions by age and segment. The size reflects volume and the depth of colour reflects cost.

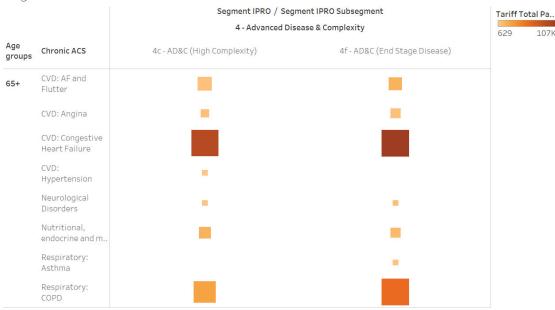

When looking at the ACS conditions for Welwyn Garden City A the highest volume and cost is within the End of Life, Frailty and Dementia segment in the over 65 age group and the next highest volume and cost is for the over 65 age group in the Advanced Disease and Complexity segment as well. It is to be noted that under End of Life, Frailty and Dementia and Advanced Disease and Complexity segments, there is a notable use by the 41-64 age group for volume and cost.

The following pages look at which ACSs contribute to this.

### UEC by Advanced Disease & Complexity, and EOL, Frailty & Dementia

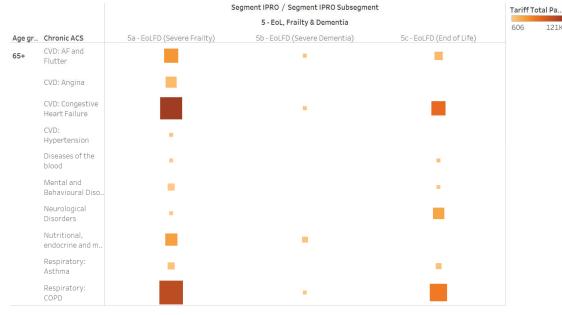

Ambulatory Care Sensitive conditions of note for people aged over 65 within the Advanced Disease and Complexity, is highlighted as Heart Failure with the highest volume and cost, followed by COPD and AF and Flutter.

For those people aged over 65 within the End of Life, Frailty & Dementia is highlighted as Heart Failure and COPD with the highest volume and cost, followed by AF and Flutter.

Grand Total	876	1012	674	527	319	134	3542

It is also important to know that a Ward may be made up of different LSOAs, and therefore have different levels of deprivation as found in the Indices of Multiple Deprivation scoring given to us be the Government; in the graph quintile 1 is the Highest or Most deprived, and quintile 5 is the Least deprived.

It is also useful to note under which Wards that the PCNs population are linked to, and specifically here, where the admissions are highest.

The indication then for these patients split by health segments also adds a layer of importance when considering how the District Councils may help you investigate your population and where the wider determinants and health inequalities may be present.

14.8% of the general population in HWE ICB live within the 4 most deprived deciles, whilst 16.1% of the population in the EoL, severe frailty and severe dementia segment live within the 4 most deprived deciles.

In Welwyn Garden City A 21.61% of the population in the EoL, severe frailty and severe dementia segment live within the 4 most deprived deciles.

The average age of a person within the Frail and End of life segment increases with affluence, ranging from 69 in the most deprived decile to 77 within the most affluent decile within the ICB.

As we would expect the average number of acute and chronic conditions is significantly higher within this segment that the general population as are all activity measures. The average number of Chronic Conditions for people within Welwyn Garden City A PCN is below the ICB, and the data shows higher usage of GP services.

Within this segment we can see the presence of Chronic Cardiac Disease, Chronic Respiratory Disease and Heart Disease being highlighted which chimes with the reason for admission within previous analysis for ACS conditions. It is to be noted that Hypertension is high across all deciles and higher than the ICB.

### Applying Machine Learning factors without our data platform

#### Why Machine Learning?

With limited capacity available across the ICB available to review lists of patients it is important that the data available is used to its maximum to refine our process and target our resources where they will have the most impact.

The aim is to build the features identified from the machine learning in to system searches for EMIS and SystmOne.

#### **Approach**

- Trained several machine learning models on ~1 million linked patient records across ~200 features from the ICS segmentation dataset, for binary A&E risk prediction (will this patient use A&E within the next year?).
- Selected a final twin ensemble model with a binary classification accuracy of 81.3%.
- Extracted output probabilities for each class to estimate a risk score for each patient, and generated risk scores for all of the patients in the segmentation data. We can think of the risk score as the model's confidence in a patient requiring A&E.
- Partitioned the patient population into 3 distinct grades, Low, Medium and High risk, based on the machine learning predictions:

Risk grade	Range of predicted risk scores	Number of patients in grade	% of population in grade
High	0.8 to 1.0	22603	1.8
Medium	0.6 to 0.8	100446	8.1

#### Creating search logic from significant features

- Features input to the predictive model include demographic features, diagnosis codes, prescribed medication, waitlist information and environmental factors such as housing and proximity to healthcare.
- Used feature rankings learned by the model to reduce the set of ~200 features to the 30 most significant features that best explain the variance in the predicted class (requiring A&E or not).
- Trained secondary machine learning models, 5-split decision trees, to classify patients into each of the three risk grades based on these 30 significant features.
- Extracted decision tree logic to create search filters for patients by risk grade. 5 splits
- $\rightarrow$  2<sup>5</sup> = 32 unique rules. These rules have been merged and prioritised (by considering individual accuracies and sample sizes) to maximise precision and recall in the final search filters.

Feature	Relative significance (%)
Age	15.03
Drug: Pain Management	10.22
Substance Abuse	4.19
Med3 Not Fit For Work	3.41
Stroke	3.03
eFI: Falls	2.23
Air Rank Quality	2.01
Waiting List Count All	1.83

Drug: Pain Management	10.22
Substance Abuse	4.19

- QOF Local, Regional, & National Comparison
- QOF Locality & PCN Comparison
- QOF Missed Diagnoses & Admission Rates
- Admission Rates Benchmarking against ICB/Place

### **QOF - Locality & PCN Comparison**

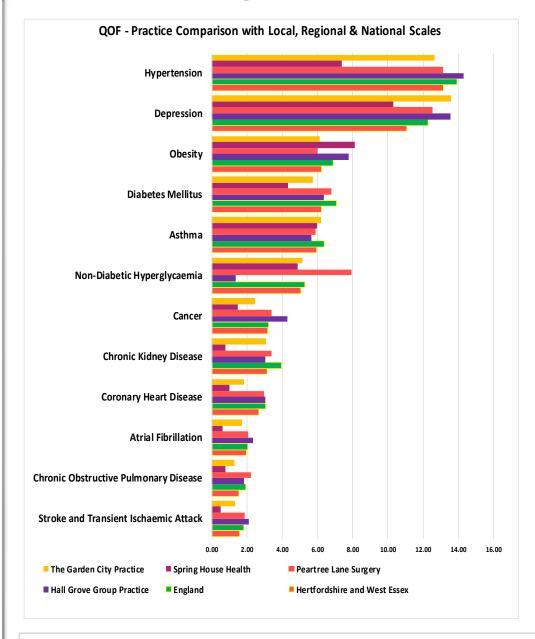

The Quality and Outcome Framework incorporates important benchmarking and scoring for all Practices across the county; we have combined a number of local, regional, and national data sets to highlight the areas that the PCN will need to consider.

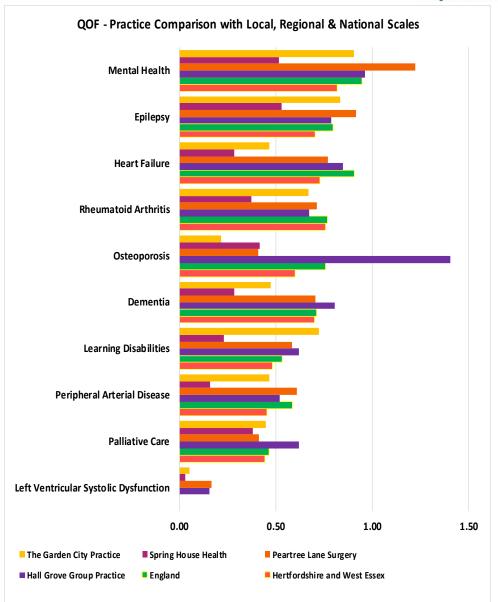

In this graph we have shown all your neighbouring PCNs within the Locality, and benchmarked against England's average.

Source: QOF National Figures, HWE PHM Team

### QOF - Local, Regional, & National Comparison

The charts here are similar to the previous slide but provides the comparison between practices within the PCN.

### **QOF - Missed Diagnoses & Admission Rates**

Disease	QOF List size 21-22	QOF Register 21- 22	QOF Prevalence 21/22	Place prevalence	ICB prevalence	Modelled prevalence	New diagnoses to meet Place average	new diagnoses to meet ICB average	New diagnoses to meet estimated prevalence
Asthma	53807	3353	6.23%	6.39%	6.17%		84	-34	
COPD	57962	948	1.64%	1.54%	1.49%	1.76%	-58	-87	72
Diabetes	45581	2808	6.16%	6.29%	6.39%	7.78%	59	103	736
Non-diabetic hyperglyaemia	44922	2649	5.90%	4.63%	5.87%	10.87%	-569	-12	2235
Hypertension	57962	7255	12.52%	13.25%	13.21%		427	403	
Atrial Fibrillation	57962	1107	1.91%	2.01%	2.02%	2.13%	60	65	125
Stroke and TIA	57962	970	1.67%	1.70%	1.61%		15	-37	
Coronary Heart Disease	57962	1404	2.42%	2.62%	2.65%		117	134	
Heart failure	57962	406	0.70%	0.71%	0.75%	1.19%	6	32	283
Left Ventricular Systolic Dysfunction	57962	74	0.13%	0.20%	0.30%		42	100	
Chronic Kidney Disease	44922	1239	2.76%	2.53%	3.21%		-102	202	
Peripheral Arterial Disease	57962	264	0.46%	0.46%	0.44%		1	-7	
Cancer	57962	1899	3.28%	3.33%	3.35%		31	40	
Palliative care	57962	235	0.41%	0.50%	0.43%		56	13	

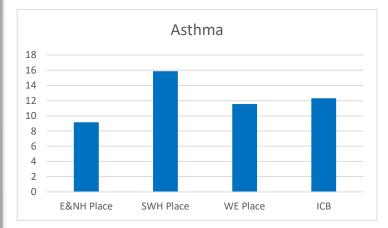

The table above shows the latest prevalence (2021/22 published August 20222) for the PCN alongside the place prevalence, ICB prevalence and the modelled prevalence for the PCN.

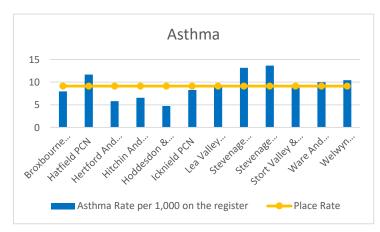

This table shows opportunities for further identification. It outlines the diagnoses to meet the place, ICB and estimated prevalence.

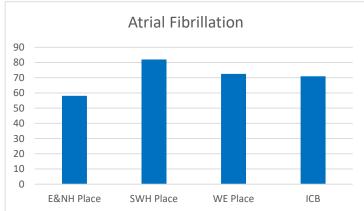

Within Ardens Manager there are case finding searches that can support PCN with identification.

#### Emergency Admission Rates per 1,000 population on the Disease Register

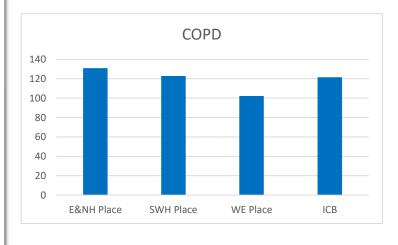

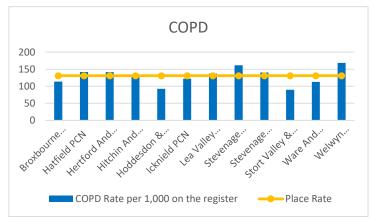

The charts on the left shows the Emergency Admissions Rates per 1,000 population on the disease register.

It shows the places compared with the ICB on the left and on the right it show the PCNs within a Place.

These are continued on the following place.

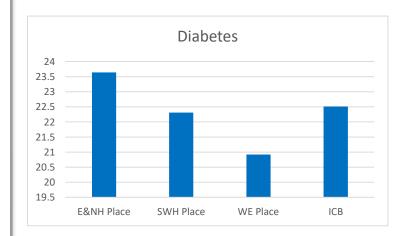

Rates may be high due to a number of factors which may include low identification.

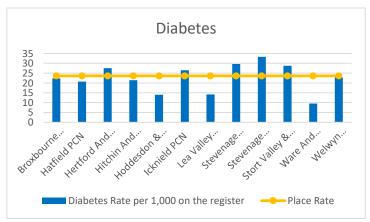

For Welwyn Garden City A the data shows higher Asthma, COPD and Heart Failure rates which was identified as a theme within the ACS analysis.

This matrix is important in defining the PCN's main segment and sub-segment health classifications, giving simple volumes but also linking how many as a percentage of each subsegment, have defined and diagnosed conditions.

Whilst the previous GP activity matrix was to investigate HIUs, this matrix has split out the GP activity by order of complexity; another method of looking at distinct patient volumes coming into the PCN which may be managed in a different way.

Deprivation is an important marker for a variety of issues and not just in health, and this matrix has taken the PCN's population split them by health segment, and then further by high, middle, or low deprivation groupings - this may further allows the PCNs to target that selected cohort of individuals to find where the determinants may be, and where a targeted approach from local partners, could be directed.

This detailed table is offering actionable insight across the PCN's population for each Practice and where their populations are in terms of a High, Medium, or Low deprivation ranking; deprivation is levied from the IMD 2019 scoring per LSOA, and is applied for every individual registered within the PCN's borders.

When targeting specific conditions to look into, a simple Bubble matrix helps us understand that a single condition will rarely be occurring by itself; this chart then highlights the PCN's linked conditions and breaks down the common diseases linked together in the PCN.

#### **Bio-Psycho-Social Indicators - Example**

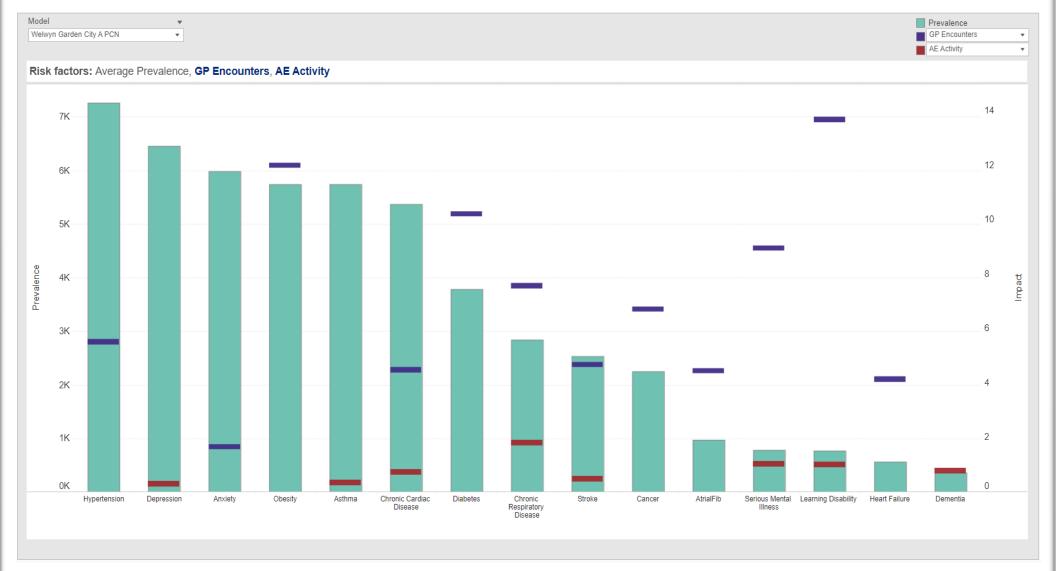

This chart gives a comparison across various selected risk conditions or characteristics, within the health segments of the PCN's population.

Here we have selected a few characteristics within the PCN's data as an example, within each segment the percentage with that risk condition is highlighted proportionately by the shaded bars in the chart.

# Risk Modelling - Prevalence against GP Activity & A&E

This Risk Model looks at the PCN's prevalence for major conditions, and this chart illustrates the number of people with certain risk factors, and also shows the impact on service utilisation, that these factors have. The height of each bar for each risk factor, shows the number of people who meet that criteria, as shown on the left hand axis; the horizontal lines relate to the correlation of a risk factor and an increase in impact on the selected target, shown on the right hand axis.

### **Public Health - Life Expectancy**

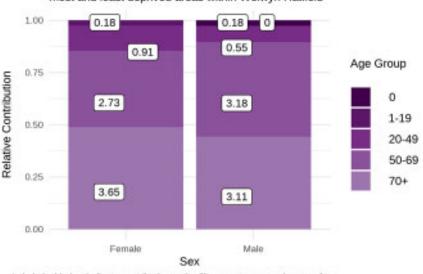

# **Life Expectancy**

Contribution of different age bands to the gap between the most and least deprived areas within Welwyn Hatfield

Labels inside bar indicate contribution to the life expectancy gap in years for each age group. This can be used to target interventions at age groups with the biggest inequality in life expectancy. The gap in life expectancy at birth for females is 7.3 years and for males is 7.02 years.
